

**UNIVERSITY HOSPITALS BIRMINGHAM NHS FOUNDATION TRUST
BOARD OF DIRECTORS
THURSDAY 29 APRIL 2010**

Title:	DRAFT QUALITY REPORT/ACCOUNT FOR 2009-10
Responsible Director:	David Rosser, Executive Medical Director
Contact:	Imogen Gray, Head of Quality Development, 6962

Purpose:	To present the Trust's draft Quality Report for 2009-10 for review.
Confidentiality Level & Reason:	
Medium Term Plan Ref:	1.1 To improve clinical quality outcomes for patients 1.2 To deliver the milestones and targets contained with the Commissioning for Quality and Innovation (CQUIN) indicators and the Quality Report.
Key Issues Summary:	<ul style="list-style-type: none"> • The Trust's draft Quality Report for 2009-10 is attached at Appendix A for review • The Board of Directors may wish to supplement the mandatory statements with explanatory wording and/or make changes to the draft content • The Trust must provide its draft report to NHS South Birmingham and Birmingham LINK by 30 April 2010 for official comment.
Recommendations:	<p>The Board of Directors is asked to:</p> <ol style="list-style-type: none"> 1. Discuss the proposed content of the Trust's 2009-10 Quality Report 2. Recommend supplementary wording and/or changes to the content 3. Approve the content of the Trust's 2009-10 Quality Report for review by NHS South Birmingham and Birmingham LINK.

Signed: 	Date: 20 April 2010
--	----------------------------

UNIVERSITY HOSPITALS BIRMINGHAM NHS FOUNDATION TRUST

BOARD OF DIRECTORS THURSDAY 29 APRIL 2010

DRAFT QUALITY REPORT FOR 2009-10

PRESENTED BY EXECUTIVE MEDICAL DIRECTOR

1. Introduction

The aim of this paper is to present the Trust's draft Quality Report for 2009-10 to the Board of Directors for review. The draft report has been produced in line with the guidance from Monitor and the Department of Health (DH) and is presented at Appendix A for review. The draft report will then be provided to NHS South Birmingham and the Birmingham Local Involvement Network (LINK) for review and comments on 30 April 2010.

2. Mandatory Content

2.1 The Trust's Quality Report must contain the following information (in order):

- Part 1:** Statement on quality from the Chief Executive
- Part 2:** Priorities for improvement and statements of assurance from the Board of Directors
- Part 3:** Other information on quality
- Annex:** Statements from primary care trusts, Local Involvement Networks and Overview and Scrutiny Committees.

2.2 The guidance is much more prescriptive for the 2009-10 Quality Reports than it was for 2008-09 and the report is therefore longer. In Part 2 the Trust has to include a number of mandatory statements, some of which are at odds with the Trust's focused approach to the management of quality. For ease of reference, the content of the draft 2009-10 Quality Report at Appendix A is colour coded as follows:

- Black text:** Content decided by the Trust
- Blue text:** Mandatory content which requires no further explanation
- Red text:** Mandatory statement which the Board of Directors may wish to qualify

3.3 The Trust is required to include detailed information on participation in both national and local clinical audits in section 2.2 which has been provided by the Governance team. A table of specific actions reported in 2009-10 following local clinical audit is shown at Appendix A of the draft Quality Report. Given the length of the report, it would be

pragmatic to remove the table and instead provide a link to it on the Trust's quality web pages.

3.4 The Board of Directors is requested to consider the mandatory statements in Part 2 of the report and suggest some supplementary wording as necessary.

3.5 The final version of the Trust's 2009-10 Quality Report will be put into the usual Trust format for publication by Medical Illustration.

3. **Specialty Quality Indicators**

Section 3.4 of the report includes provisional data for a wide range of the specialty quality indicators developed through the Trust's Quality and Outcomes Research Unit (QuORU). At least one indicator is included for the majority of the Trust's specialties. The selection of indicators and data for 2009-10 and 2008-09 are currently being validated by the QuORU leads and clinicians concerned. The titles of the indicators will also be revised to make them more understandable for patients and the public. The validated indicator data will be tabled at the Board of Directors meeting on 29 April 2010.

4. **2009-10 Data**

The most recent data for 2009-10 is included within the draft report, some of which will need to be updated in the final report as follows:

Section 2.2.4: Finalised CQUIN payment information will be available in June 2010

Section 3.2: MRSA and *C.difficile* rates and readmissions data

Section 3.2: The Trust's 2009 National Inpatient Survey results are due to be published in May 2010

5. **My Health at UHB**

Section 3.10 of the Trust's draft 2009-10 Quality Report provides information about the prototype 'My health at UHB' website which has been piloted in Liver Medicine during 2009-10. The site enables patients with long-term conditions to access information about their appointments and blood results for example. This section has been provisionally included on the basis that a more detailed paper will be provided to the Board of Directors meeting on 3 June 2010 by the Medical Director. This section can be removed as required.

6. **Next Steps**

The content of the Trust's draft Quality Report for 2009-10 will be finalised immediately after the Board of Directors meeting and provided to NHS South Birmingham and Birmingham LINK for review and comment. Birmingham City Council Overview and Scrutiny Committee (OSC) has opted not to provide a comment but will be provided with the Trust's draft report anyway.

7. **Recommendations**

The Board of Directors is asked to:

1. Discuss the proposed content of the Trust's 2009-10 Quality Report
2. Recommend supplementary wording and/or changes to the content
3. Approve the content of the Trust's 2009-10 Quality Report for review by NHS South Birmingham and Birmingham LINK.

2009-2010 Quality Report

This report covers the period 1 April 2009 to 31 March 2010

Part 1: Chief Executive's Statement

The Vision of University Hospitals Birmingham NHS Foundation Trust (UHB) is "to deliver the best in care" to our patients. Quality in everything we do underpins this Vision in the overall Trust Strategy and the Corporate, Divisional and Specialty Strategies which underpin it. Clinical Quality and Patient Experience are two of the Trust's Core Purposes and provide the framework for the Trust's robust approach to managing quality.

UHB has made good progress in relation to all three quality improvement priorities for 2009-10 identified in last year's Quality Report: reducing medication errors, reducing infection, and improving patient experience and satisfaction. The Trust has however chosen to continue with these priorities in 2010-11 to deliver further improvements for our patients, particularly around reducing omitted drug doses.

The Trust has also identified two further quality improvement priorities for 2010-11: completion of venous-thromboembolism (VTE) risk assessment on admission for all patients and improving timeliness of administration of first antibiotic doses.

The Trust has continued to communicate with and involve staff and stakeholders in delivering high quality services during 2009-10. For example, clinical staff and the Health Informatics team have developed a wide range of specialty level quality indicators, some of which are shown in Part 3 of this report.

A key part of UHB's commitment to quality is being open and honest about performance. The Quality web pages were launched in November 2009 and provide staff, patients, the public and other stakeholders with up to date information on the Trust's performance in relation to quality: <http://www.uhb.nhs.uk/Services/All/Quality/Home.aspx>
Information provided includes regular Quality Report updates and performance for some of the specialty level indicators, which will be extended during 2010-11.

The Trust's focused approach to quality is driven by innovative and bespoke information systems which enable us to capture and use real-time data in ways which few other UK trusts are able to do. During 2009-10, the Trust has developed an interactive Healthcare Evaluation Data (HED) tool and further developments have been implemented within the Prescribing Information and Communication System (PICS) which are described in Part 3 of this report.

Data quality and the timeliness of data are fundamental aspects of UHB's management of quality. Data is provided to clinical and managerial teams as close to real-time as possible through various means such as the Trust's digital Clinical Dashboard. Information is subject to regular review and challenge at specialty, divisional and Trust levels, by the Clinical Quality Monitoring Group, Care Quality Group and Board of Directors for example.

The Trust's internal auditors will also review some of the processes and mechanisms through which data is extracted and reported in the Quality Report during 2010-11 to provide further assurance. I can therefore confirm that to the best of my knowledge the information contained within this report is accurate.

Finally, the opening of the first phase of the Queen Elizabeth Hospital Birmingham in June 2010 will allow us to continuously improve the quality of care we provide in a world-class environment.

.....
Julie Moore, Chief Executive

June 3, 2010

Part 2: Priorities for improvement and statements of assurance from the Board of Directors

2.1 Quality Improvement Priorities

The Trust's 2008-09 Quality Report set out three key priorities for improvement during 2009-10:

Priority 1: Reducing errors (with a particular focus on medication errors)

Priority 2: Infection prevention and control

Priority 3: Improve patient experience and satisfaction.

The Trust has made good progress in relation to all three quality improvement priorities during 2009-10 which is detailed further below. The Board of Directors has chosen to continue with these 3 improvement priorities for 2010-11 plus two additional ones (shown in bold) as follows:

Priority 1: Reducing errors (with a particular focus on medication errors)

Priority 2: Time from prescription to administration of first antibiotic dose

Priority 3: Venous thromboembolism (VTE) risk assessment on admission (within 24hrs)

Priority 4: Improve patient experience and satisfaction

Priority 5: Infection prevention and control

The improvement priorities for 2010-11 were initially selected by the Trust's Clinical Quality Monitoring Group chaired by the Executive Medical Director, following consideration of performance in relation to patient safety, patient experience and effectiveness of care. These were then shared with the Trust's Governors and the Birmingham Local Involvement Network (LINK). The focus of the patient experience priority was decided by the Care Quality Group which is chaired by the Executive Chief Nurse and also has Governor representation. The priorities for 2010-11 were then finally approved by the Board of Directors.

The performance in 2009-10 and the rationale for selection of each priority are provided in detail below.

Priority 1: Reducing errors (with a particular focus on medication errors)

Performance

During 2008-09, the Trust developed the ability to report on the number of drugs prescribed to patients but not administered (omitted) on the Prescribing Information and Communication System (PICS). The system logs each drug administration relating to every single prescription. Baseline data for January-March 2009 showing the percentage of antibiotic and other drug doses prescribed to patients but not administered (omitted) on PICS was reported in the Trust's Quality Report for 2008-09. This data includes both drug doses which are appropriately omitted (by nursing staff making valid clinical decisions for example) and doses unintentionally omitted due to a variety of administrative reasons.

The percentage of omitted antibiotic and non-antibiotic drug doses is shown below for each month (October 2009-March 2010) and the full 2009-10 year. Whilst the Trust has reduced omitted antibiotic and non-antibiotic doses, performance remains unsatisfactory and this therefore remains a key improvement priority for 2010-11.

Drug Omissions								
Time Period/ Drug Type	Oct 09	Nov 09	Dec 09	Jan 10	Feb 10	Mar 10	2009-10	Baseline (Jan-Mar 09)
Antibiotics	8.4%	8.2%	8.6%	7.9%	7.8%	7.7%	8.7%	11.2%
Non-Antibiotics	18.7%	18.1%	18.1%	17.2%	17.8%	16.5%	18.5%	20.1%

Initiatives implemented during 2009-10

- The recording of reasons for drug omissions was reviewed and rationalised within PICS to improve the quality of data capture and reduce inappropriate omissions.
- Pause button implemented within PICS to allow Doctors to pause prescriptions e.g., when a patient has gone to theatre and to quickly re-start them again when required.
- Monthly root cause analyses (in-depth reviews) of selected missed antibiotic dose cases by the Trust's Executive, divisional management and clinical teams began in March 2010.
- A change was implemented within PICS to enable Parkinson's drugs to be prescribed at non-standard times to improve the timeliness of administration.

Initiatives to be implemented in 2010-11

- Nurse pause function will be implemented within the Prescribing Information and Communication System to enable Nursing staff to pause prescriptions for certain drugs where clinically appropriate.
- Potential expansion of the Executive root cause analysis meetings to include other missed drugs.

How progress will be monitored, measured and reported

- Progress will continue to be measured at ward, specialty, divisional and Trust levels using information recorded in the Prescribing Information and Communication System. This includes automatic email alerts to different levels of management staff where specialty performance is outside agreed targets.
- Omitted drug doses will continue to be communicated daily to clinical staff via the Clinical Dashboard (which displays real-time quality information at ward-level) and monitored at divisional, specialty and ward levels.
- Performance will continue to be reported to the Chief Executive's Advisory Group, the Chief Operating Officer's Group and the Board of Directors each month to ensure appropriate actions are taken.
- Progress will also be reported in the quarterly Quality Report updates published on the Trust's quality web pages.

Priority 2: Time from prescription to administration of first antibiotic dose

Current Status

When treating certain conditions such as severe infections or sepsis, delays in administration of the first dose of antibiotic can result in considerable patient harm or even death. The National Patient Safety Agency released a Rapid Response Report in February 2010 which focuses on reducing harm from omitted or delayed medicines in hospital. There is evidence within the clinical literature that rapid antibiotic delivery can reduce patient harm and improve outcomes, and that the time from prescription to administration of first antibiotic dose for certain conditions should ideally be 60 minutes or less.

As outlined under Priority 1 above, the Trust is already focusing on omitted doses, and has extended this to specifically include delays in administration of first antibiotic doses. Although data on omitted doses is captured within the Prescribing Information and Communication System and timeliness of administration is an issue, it is currently difficult to assess delays. This is because some patients are prescribed antibiotics days or even weeks ahead at pre-admission clinics for example which inappropriately skews the prescription to administration time.

New initiatives to be implemented in 2010-11

- Identify clinical exception rules and refine methodology for indicator measurement.
- Establish process to undertake multi-disciplinary root cause analyses for reporting to the Executive Team.
- Provide education and training to improve communication and awareness of this issue.
- Establish baseline performance at Trust and specialty levels and identify trajectories to deliver reduction.

How progress will be monitored, measured and reported

- Performance will be measured and monitored against the Trust and specialty level trajectories (once they have been set) using PICS data and the Trust's usual reporting tools.
- Careful scrutiny of the data will also be undertaken to ensure that it does represent unintended delays.
- Progress will be monitored by the Clinical Quality Monitoring Group and reported in the quarterly Quality Report updates published on the Trust's quality web pages.

Priority 3: Venous thromboembolism (VTE) risk assessment on admission (within 24hrs)

Current Status

Venous Thromboembolism (VTE) is the term used to describe deep vein thrombosis (blood clot occurring in a deep vein, most commonly in the legs) and pulmonary embolism (where such a clot travels in the blood and lodges in the lungs) which can cause considerable harm or death. VTE is associated with periods of immobility and can largely be prevented if appropriate preventative measures are taken.

Whilst most other trusts have to rely on a paper-based assessment of the risk of VTE for individual patients, the Trust has been using an electronic risk assessment tool within the Prescribing Information and Communication System since June 2008 for all inpatient admissions. The tool provides tailored advice regarding preventative treatment based on the assessed risk. The Trust is therefore able to capture the data from all of these assessments which is shown in the table below for 2009-10:

Admission Year	Admission Month	Surgical and Non Surgical Combined	Postponed	Not Required	Surgical and Non Surgical assessments done within 24 hours of admission as a percentage of all assessments
2009	April	86.24%	6.06%	7.70%	73.52%
	May	86.95%	4.73%	8.32%	73.75%
	June	89.32%	5.06%	5.62%	75.00%
	July	86.83%	7.30%	5.87%	73.58%
	August	82.10%	9.52%	8.38%	69.42%
	September	81.63%	12.20%	6.17%	69.66%
	October	84.67%	8.24%	7.09%	72.89%
	November	84.71%	7.86%	7.43%	72.09%
	December	85.87%	8.20%	5.93%	72.89%
2009 Total		85.35%	7.71%	6.94%	72.53%
2010	January	84.63%	9.10%	6.26%	72.95%
	February	84.92%	8.69%	6.39%	73.66%
	March	84.97%	8.88%	6.15%	77.81%
2010 Total		84.83%	8.90%	6.27%	74.64%

Providing such tailored advice depends upon the level of information capture at admission, for example whether the patient is surgical or non-surgical where the preventative measures may be different. We also recognise that in some circumstances not all of the patient-specific information may be available immediately on admission (e.g., for unconscious or critically ill patients) and therefore other clinical priorities determine that the risk assessment may be postponed. In rare cases a risk assessment may not be required, such as for a patient who is being investigated for a VTE when treatment rather than prevention is required.

Considerable national attention has been given to this subject over the past few months by the Department of Health and the National Institute for Health and Clinical Excellence (NICE) which published new guidance in January 2010. Ensuring that 90% of all patients have a full VTE risk assessment completed within 24 hours of admission by the end of 2010-11 is now a mandatory, national Commissioning for Innovation and Quality (CQUIN) indicator which the Trust has agreed with NHS South Birmingham for 2010-11.

Initiatives implemented during 2009-10

- Automatic Doctor prompts at 24 hours for postponed risk assessments.
- Automatic reminders if preventative medication is not given despite advice from the assessment tool.
- Where elastic compression stockings are recommended for surgical patients, these are now automatically prescribed within PICS.

New initiatives to be implemented in 2010-11

- In the plans to update the risk assessment process in line with NICE recommendations, the option of 'not required' will be removed. An initial screening question will be used in the assessment tool instead that will determine for the clinician if a full risk assessment is actually not required (for example for a short stay patient who is likely to remain fully mobile).
- The electronic risk assessment tool will need to be implemented for day-case patients too.

How progress will be monitored, measured and reported

- Performance will be measured using PICS VTE risk assessment data and tracked against the year-end target.

- The Trust's Thrombosis Group working closely with the PICS team will be responsible for providing education and feedback about performance throughout the Trust.
- Performance will be monitored by the Trust's Clinical Quality Monitoring Group and the Board of Directors.
- Progress will also be reported in the quarterly Quality Report updates published on the Trust's quality web pages.

Priority 4: Improve patient experience and satisfaction

Performance

Ten times as many patients responded to the electronic patient survey during 2009-10 compared to 2008-09, providing a wealth of information about their experience:

Feedback method	2009-10	2008-09
Bedside TV	5,860	1,100
Hand-held devices	3,810	N/a
Discharge lounge	712	N/a
Total	10,382	1,100

The survey results show that the Trust has improved patient experience and satisfaction across all five aspects of care during 2009-10:

Electronic real-time patient survey responses

Time period/ Survey Questions		2009-10	2008-09
Dignity and respect	Percentage of patients who said they were always treated with dignity and respect	86.9%	67.2%
	Percentage of patients who said they were always or sometimes treated with dignity and respect	98.6%	92.8%
Privacy	Percentage of patients who said their privacy was always maintained whilst being examined or treated	92.5%	78.0%
	Percentage of patients who said their privacy was always or sometimes maintained whilst being examined or treated	98.7%	94.0%
Involvement in decisions	Percentage of patients who said they were always involved in decisions about their care and treatment	70.6%	47.0%
	Percentage of patients who said they were always involved, or involved to some extent, in decisions about their care and treatment	93.6%	83.9%
Cleanliness of hospital and ward	Percentage of patients who rated the hospital and ward as very clean	70.3%	45.7%
	Percentage of patients who rated the hospital and ward as very clean or fairly clean	97.7%	90.3%
Overall rating of care	Percentage of patients who rated their overall care as very good or excellent	84.9%	61.9%
	Percentage of patients who rated their overall care as good, very good or excellent	95.2%	79.4%

The Trust's National Adult Inpatient Survey results for 2009 are shown in Part 3 of this report.

Complaints

In 2009/10, there has been a 5.7% increase in the number of complaints received by the Trust, compared to the previous year. This may be due to both improved access to the complaints process following the introduction new legislation governing complaints in April 2009 and increased activity.

	2009-10	2008-09
Total number of complaints	643	609
Response within deadline*	91%	88%
Referrals for independent review by referral date	27	6
Referrals for independent review by complaint date	6	4

* Response data for 2009/10 relates to complaints received up to and including 31 January 2010, the latest full month for which data is available.

Top 3 Complaint categories	2009-10	2008-09
Main category		
1. Clinical treatment	272	254
2. Out-patient appointment delay/cancellation	109	97
3. Communication/information	76	69
All issues		
1. Clinical treatment	595	732
2. Communication/information	315	408
3. Attitude of Staff	150	103

Ratio of Complaints to Activity

		2009-10	2008-09
Inpatients	FCEs*	124,589	121,653
	Complaints	277	294
	Rate per 1000 FCEs*	2.22	2.42
Outpatients	Appointments	676,515	466,798
	Complaints	309	263
	Rate per 1000 appointments	0.46	0.56
A&E	Attendances	82,632	83,051
	Complaints	57	52
	Rate per 1000 attendances	0.69	0.63

*FCE = finished consultant episode which denotes the time spent by a patient under the continuous care of a consultant.

Compliments

Compliments are recorded by the Patient Advice and Liaison Service (PALS) on behalf of the Trust. The majority of compliments are received in writing – by letter, email or feedback leaflet – and the rest are received verbally via telephone or face to face.

The number of compliments recorded has risen significantly during 2009-10. The majority relate to treatment received although an increasing amount specifically mention medical or nursing care and friendliness of staff:

Compliments Subtype	Number Received in 2009-10	Number Received in 2008-09
Treatment received	132	141
Nursing care	85	10
Friendliness of staff	75	26
Efficiency of service	36	8
Medical care	20	7
Other	4	2
Facilities	4	11
Information provided	3	0
Comment	0	1
Totals:	359	206*

* The number of compliments received in 2008-09 has increased slightly from that shown in the Trust's 2008-09 Quality Report due to some being received after year end which reflect care/treatment provided during 2008-09. Some of the 2008-09 compliments have also been re-categorised to provide more meaningful data e.g., moved from 'Treatment received' to a more specific category such as 'Nursing Care'.

Initiatives implemented during 2009-10

- Patient survey responses were uploaded every twelve hours onto the Clinical Dashboard for each ward, providing real-time feedback to wards to enable them to address any issues quickly. The Executive Chief Nurse and Associate Directors of Nursing have been alerted to the excellent and poor responses from patients.
- Patient experience surveys are currently being piloted in the Ophthalmology Outpatient Department using hand-held electronic tablets.
- A follow-up telephone survey has been developed for use with patients on discharge and staff have been recruited to conduct the surveys.
- The Patient Experience Analyst commenced in post at the end of August 2009 and provides a weekly patient feedback report to Divisions and a detailed quarterly report to the Care Quality Group.

Improving patient experience and satisfaction in 2010-11

The Trust has chosen to focus on measuring, monitoring and improving performance for the following National Adult Inpatient Survey questions during 2010-11:

- Involvement in decisions about treatment/care
- Hospital staff available to talk about worries/concerns
- Privacy when discussing condition/treatment
- Informed about medication side effects
- Informed who to contact if worried about condition after leaving hospital
- Did staff do all they could to control pain?

These questions have been selected by the Trust's Care Quality Group which has Governor representation. They also include those covered by the nationally mandated Commissioning for Quality and Innovation (CQUIN) indicator for 2010-11.

New initiatives to be implemented in 2010-11

- Implement telephone survey and roll out survey used in Ophthalmology to other Outpatient areas.
- Use of an electronic stand in the Emergency Department to gain feedback from ambulatory patients.
- Development of a comprehensive Divisional report that brings together all elements of patient feedback, including survey responses, Patient Advice and Liaison Service (PALS) contacts, complaints, comments and compliments.
- Analysis of data via demographic information to identify the experience of patients from a range of diverse backgrounds to identify potential areas of inequity.

How progress will be monitored, measured and reported

- Feedback rates and responses will continue to be measured and communicated via the Clinical Dashboard.
- Performance will continue to be monitored as part of the Back to the Floor visits by the senior nursing team with action plans developed as required.
- Regular patient feedback reports will be provided to the Patient Experience Group, Care Quality Group and the Board of Directors.

Progress will also be reported in the quarterly Quality Report updates published on the Trust's quality web pages.

Priority 5: Infection prevention and control

Performance

2009-10 has been another excellent year with the numbers of both MRSA bloodstream infections and *C.difficile* cases more than halving compared with 2008-09 and well below the agreed trajectories:

Time Period/ Infection Type	2009-10	Agreed Trajectory for 2009- 10	2008-09	Agreed Trajectory for 2008- 09	2007-08	Agreed Trajectory for 2007- 08
<i>C. difficile</i> (post-48 hour cases)	178	348	357	526	658	N/a
MRSA bloodstream infections	13	30	35	48	76	48

Both of these organisms remain a high priority during 2010-11 as new trajectories come into play requiring even greater reductions. The Trust will need to reduce the number of MRSA bloodstream infections to 11 and *C.difficile* to 13 cases or less per month during 2010-11. *C.difficile* remains the greatest challenge due to the need to maintain a consistent performance across the year.

Initiatives implemented during 2009-10

- The Trust has continued to make good progress on the management of the High Impact Interventions and now completes root cause analyses for all MRSA blood stream infections and *C.difficile* cases, ensuring that learning is gained from each case.
- A high pressure wash decontamination unit has been implemented within the Trust. which has been associated with an overall reduction in MRSA bacteraemia and C diff cases during the past year. This will also be implemented in the new hospital.
- The National Patient Safety Agency (NPSA) Matching Michigan patient safety project commenced on 1 December 2009. Since 15 December 2009, UHB has been submitting monthly data to the NPSA from all four Intensive Care Units on bloodstream infections linked to the use of central venous catheters (CVCs).

Initiatives to be implemented in 2010-11

- Enhanced cleaning with vapour decontamination used as part of the standard terminal clean in the new hospital.
- Expansion of MRSA screening to include all admissions, including emergencies, and follow through to decolonisation in the community.
- Strengthening the use of learning outcomes from the root cause analyses for MRSA bacteraemia and *C.difficile*.
- Use of routine surveillance to identify those organisms which will be future priorities for reduction

How progress will be monitored, measured and reported

- The number of MRSA and *C.difficile* cases will be measured and monitored against the 2010-11 trajectories.
- Performance will be monitored daily via the Clinical Dashboard and daily/weekly email alerts.
- All MRSA bloodstream infections will continue to be reported as serious incidents requiring investigation (SIRIs) to NHS South Birmingham.
- Monthly root cause analyses will continue to be undertaken for MRSA bloodstream infections and *C.difficile* outbreaks.
- Progress will also be reported in the quarterly Quality Report updates published on the Trust's quality web pages.
- Performance will be reported monthly to the Trust's Infection Prevention and Control Committee and the Board of Directors.

2.2 Statements of assurance

2.2.1 Information on the review of services

During 2009/10 the University Hospitals Birmingham NHS Foundation Trust provided and/or sub-contracted 61 NHS services.

The University Hospitals Birmingham NHS Foundation Trust has reviewed all the data available to them on the quality of care in 61 of these NHS services.

The income generated by the NHS services reviewed in 2009/10 represents 100% per cent of the total income generated from the provision of NHS services by the University Hospitals Birmingham NHS Foundation Trust for 2009/10.

2.2.2 Information on participation in clinical audits and national confidential enquiries

During 2009/10 36 national clinical audits and 3 national confidential enquiries covered NHS services that University Hospitals Birmingham NHS Foundation Trust provides.

During 2009/10 University Hospitals Birmingham NHS Foundation Trust participated in 83% national clinical audits and 100% national confidential enquiries of the national clinical audits and national confidential enquiries which it was eligible to participate in.

The national clinical audits and national confidential enquiries that University Hospitals Birmingham NHS Foundation Trust was eligible to participate in during 2009/10 are as follows: (see table below)

The national clinical audits and national confidential enquiries that University Hospitals Birmingham NHS Foundation Trust participated in during 2009/10 are as follows: (see table below)

The national clinical audits and national confidential enquiries that University Hospitals Birmingham NHS Foundation Trust participated in, and for which data collection was completed during 2009/10, are listed below alongside the number of cases submitted to each audit or enquiry as a percentage of the number of registered cases required by the terms of that audit or enquiry (see table below).

Audit Type	Audit UHB eligible to participate in	UHB Participation 2009-10	Percentage of required number of cases submitted
Part of the National Clinical Audit and Patient Outcomes Programme	Adult cardiac interventions (eg, angioplasty)	Yes	100%
	Adult cardiac surgery	Yes	100%
	Bowel Cancer (NBOCAP)	Yes	63.90%
	Cardiac Ambulance Services	Yes	N/A – specific number not required
	Cardiac rhythm management (Pacing/Implantable Defibrillators)	Yes	100%
	Congenital heart disease (children and adults)	Yes	N/A - data entry deadline May 2010
	Continence	Yes	105%
	Head & neck cancer (DAHNO)	Yes	Not available
	Heart failure	Yes	N/A – data entry deadline May 2010
	Hip Fracture	Yes	Not available
	Lung cancer (LUCADA)	Yes	92%
	Mastectomy & Breast Reconstruction	Yes	66%
	Myocardial Ischaemia (MINAP)	Yes	N/A – specific number not required

	National Carotid Interventions Audit	Yes	Not available
	National Diabetes Audit	Yes	99%
	National Kidney Care - vascular access	No – planning to participate during 2010	-
	National Pain Audit	Yes	N/A – specific number not required
	National Stroke Audit - organisational audit	Yes	N/A – specific number not required
	Oesophago-gastric (stomach) cancer	Yes	100%
Not part of the National Clinical Audit and Patient Outcomes Programme	Adult Critical Care (ICNARC) - Case Mix Programme	Yes for 2 of the 4 ITUs	100% for 2 units
	British Thoracic Society - Adult Community Acquired Pneumonia	Yes	N/A - data entry deadline May 2010
	British Thoracic Society - NIV (Adult)	Yes	N/A - data entry deadline May 2010
	British Thoracic Society - Adult Asthma	No	-
	British Thoracic Society - Emergency Oxygen	No	-
	National Comparative Audit of Blood Transfusion - Audit of Blood Collection	Yes	100%
	National Elective Surgery PROMS - hernia	Yes	55%
	National Elective Surgery PROMS - varicose veins	Yes	38%
	College of Emergency Medicine - Pain in children	No	-
	College of Emergency Medicine - Hip Fracture	Yes	70%
	College of Emergency Medicine - Severe and Moderate Asthma	No	-
	Potential donor audit	Yes	100%
	Renal Registry	Yes	100%
	Renal Transplant	Yes	N/A – specific number not required
Severe Trauma	No, data for 09-10 to be entered	-	

	UK Cardiothoracic Transplant Audit	Yes	100%
	UK Liver Transplant Audit	Yes	100%
National Confidential Enquiries (NCEPOD)	National Confidential Enquiries (NCEPOD)	UHB Participation 09/10	Percentage of required number of cases submitted
	Peri-Operative Study	Yes	47%
	Emergency and Elective Surgery in the Elderly	Yes	Casenotes 100% Surgical Questionnaires 100% Anaesthetic Questionnaires 43%
	Parenteral nutrition	Yes	73%

Percentages given are latest available figures. 'Not available' indicates that data has been submitted but the number of cases submitted as a percentage of the number of required cases is not available. This could be because the Trust is awaiting confirmation of percentage by the national body or the precise number of required cases is not available.

UHB's audit strategy has been to prioritise support for participation in the national audits included in the National Clinical Audit and Patient Outcomes Programme (NCAPOP), as agreed by the Clinical Audit and Effectiveness Committee, which directs audit priorities in the Trust. The NCAPOP consists of a series of audits commissioned and managed by the Healthcare Quality Improvement Partnership (HQIP), under the guidance of the National Clinical Audit Advisory Group (NCAAG), and funded by the Department of Health. Not all of the audits listed above provide reports or recommendations back to the Trust. UHB is currently reviewing and prioritising its audit strategy for 2010-11 to reflect clinical priorities and available resources.

The Trust's Clinical Governance Support Unit facilitates the reporting and monitoring of Trust participation in national audits and actions taken in accordance with recommendations of national audit reports. This activity is reported to the Clinical Audit and Effectiveness Committee and the Clinical Quality Monitoring Group which directs action to improve the quality of care. Exceptions are also reported to the Trust's Audit Committee.

The reports of 15 national clinical audits were reviewed by the provider in 2009/10 and University Hospitals Birmingham NHS Foundation Trust intends to take the following actions to improve the quality of healthcare provided:

Audit reports reviewed	Actions
Adult cardiac surgery	UHB demonstrated compliance with national recommendations and showed activity, surgical results and quality of care in line with the national data submitted around the country.
Adult Critical Care (ICNARC) - Case Mix Programme	The data is used for regular review of mortality rates, benchmarking and comparison against similar units and local audit and research projects.
Cardiac Ambulance Services	UHB is supporting ambulance services to make improvements by sharing information about the outcomes for patients having a heart attack, collected via the Myocardial Infarction National Audit Project

Audit reports reviewed	Actions
	(MINAP). The Ambulance outcomes audit aims to share MINAP data with the Ambulance Trusts by linking the ambulance job number with the relevant MINAP entry.
Congenital heart disease (children and adults)	UHB is working with the Birmingham Children's Hospital to ensure all the documentation for the surgical record contains the following information the NHS number, date of discharge, and mode of discharge. The action points following the recommendations of the inclusion of perfusion records in the patient notes are to be discussed.
Head & neck cancer (DAHNO)	The interval from biopsy to reporting should be less than 10 days; UHB achieved 92%. An audit has been carried out which has shown an improvement in waiting times. This will continue to be monitored.
Lung cancer (LUCADA)	Trust considered to meet all recommendations
Mastectomy & Breast Reconstruction	Trust considered to meet all recommendations
Myocardial Ischaemia (MINAP)	Improving primary angioplasty performance within 150 minutes reported at 73%. For patient quality improvement UHB has introduced 24/7 primary angioplasty. The facilities for primary Percutaneous Coronary Intervention (pPCI) are on a separate site to the A&E department. To improve on this figure close links with the ambulance service have been made so that crews can alert teams directly to activate the pPCI pathway more promptly, particularly during out of hours. A change to our system of pPCI activation is being introduced. All patients will be brought directly to the Percutaneous Coronary Intervention (PCI) site (QE cath labs) irrespective of time of presentation. If out of hours, the ambulance team have agreed to stay with the patient until the pPCI team arrive. This should avoid the additional delay caused by an out of hours inter hospital transfer. For those patients who do not get admitted to a cardiac facility a clinical pathway is in place that ensures all patients who are found to have a raised troponin are referred to the cardiologist.
National Falls and Bone Health in Older People	Improvements have been made to services for hip fracture patients. For example a trauma 'navigator' role has been put in place to speed up the whole patient journey including admission to theatre, new theatre sessions have been made available and where possible patients are cohorted together on one ward. Length of stay and mortality are regularly monitored.
National Kidney Care - Patient Transport Survey Report	The regional network in the West Midlands have put together a regional group. The first meeting of the Regional Transport Group will take place in April 2010. Each satellite unit has also set up regular meetings every two months with the transport department to discuss any issues, improvements etc. Each satellite unit is also working to set up a patient group.
National Stroke Audit	Improvements have been made to stroke services, such as direct admissions to the Acute Stroke Unit; re-design of Stroke Coordinator role; early multidisciplinary therapy assessments and patient centred goals; improved team communication about patients; improved written documentation of care and regular feedback sessions to all staff. Data on key indicators of quality is collected on an ongoing basis in order to monitor performance.

Audit reports reviewed	Actions
Renal Registry	Trust considered to meet all recommendations
Renal Transplant	Trust considered to meet all recommendations
Severe Trauma	Creation of an administrative post to assist with audit is in discussion. Specific cases highlighted to consultants for review - consultants to review major cases.
UK Cardiothoracic Transplant Audit	The audit reports centre-specific and total national data on outcomes for heart and lung transplantation in the UK. The unit was fully compliant with data collection and outcomes were comparable with other centres. No action points were raised specifically requiring this units attention apart from the need for continuous monitoring.

At UHB a wide range of local clinical audit is undertaken in clinical specialties and across the Trust. These may be highly specialised audits examining whether treatments or services for specific medical conditions, such as diabetes, are meeting standards of best practice; or they may be broader audits of particular aspects of services, such as monitoring staff compliance with infection control protocols or checking that standards of documentation are being met. A total of 677 clinical audits were registered with UHB's clinical audit team as having commenced or been completed at UHB during 2009-10.

The reports of 280 local clinical audits were reviewed by the provider in 2009/10 and University Hospitals Birmingham NHS Foundation Trust intends to take the following actions to improve the quality of healthcare provided:

This figure indicates that the results of 280 clinical audits were reported and fed back to staff within clinical areas and those reports were submitted to UHB's clinical audit team. At UHB, staff undertaking clinical audit are required to report any actions that should be implemented to improve service delivery and clinical quality. A list of examples of specific actions reported is shown at Appendix A. These include measures such as: updating patient information; developing new protocols or guidelines for staff; increasing staff awareness of required standards through training or education sessions; making changes to staff roles; implementing new care plans or assessment tools for patients; and purchasing equipment.

Each clinical specialty at UHB is required to plan a programme of audit for the year ahead, based on national audit priorities, areas of risk and locally determined priorities.

2.2.3 Patient participation in clinical research

The number of patients receiving NHS services provided or sub-contracted by University Hospitals Birmingham NHS Foundation Trust that were recruited during that period to participate in research approved by a research ethics committee was 5271.

This data reflects active research studies during 2009-10, some of which were initiated prior to April 2009. The level of patient recruitment has therefore been averaged across the duration of each study to identify patient recruitment for 2009-10.

2.2.4 Use of the Commissioning for Quality and Innovation (CQUIN) payment framework

A proportion of University Hospitals Birmingham NHS Foundation Trust's income in 2009/10 was conditional upon achieving quality improvement and innovation goals agreed between University Hospitals Birmingham NHS Foundation Trust and NHS South Birmingham, through the Commissioning for Quality and Innovation payment framework. Further details of the agreed

goals for 2009/10 and for the following 12 month period are available on request from the Communications Team (Tel: 0121 627 2023 or email Communications@uhb.nhs.uk). This information is also listed on the Trust's quality web pages:
<http://www.uhb.nhs.uk/Services/All/Quality/Home.aspx>

The amount of University Hospitals Birmingham NHS Foundation Trust's income in 2009/10 which was conditional upon achieving quality improvement and innovation goals was £1.85m and the Trust received £XXm in payment.

This figure has been arrived at as a percentage of the healthcare income which will be included within the Trust's 2009-10 accounts and does not represent actual outturn (as an estimate has to be included for Month 12 income). The actual figure will not be known until June 2010 when we will have a final position as reconciled with the CBSA. Also whilst we have received payment throughout the year as each month has been agreed with CBSA, final payment of CQUIN will not take place until the June 2010 reconciliation point.

2.2.5 Care Quality Commission (CQC) registration status and periodic/special reviews

University Hospitals Birmingham NHS Foundation Trust is required to register with the Care Quality Commission and its current registration status is registered without compliance conditions. University Hospitals Birmingham NHS Foundation Trust has the following conditions on registration: provider conditions only which stipulate that the regulated activities the Trust has registered for may only be undertaken at Queen Elizabeth Medical Centre and Selly Oak Hospital.

The Care Quality Commission has not taken enforcement action against University Hospitals Birmingham NHS Foundation Trust during 2009/10.

University Hospitals Birmingham NHS Foundation Trust is subject to periodic review by the Care Quality Commission and the last review was on 13 October 2009 (date of publication of the Annual Health Check scores for 2008-09). The CQC's assessment of the University Hospitals Birmingham NHS Foundation Trust following that review was Excellent for Quality of Services and Excellent for Quality of Financial Management.

University Hospitals Birmingham NHS Foundation Trust intends to take the following actions to address the points made in the CQC's assessment:

The Trust underachieved on the national priority performance indicator for stroke care based on the results of the 2008 National Sentinel Stroke Audit and has invested funding to improve the service. Key quality indicators for stroke patients, such as brain scan with 24 hours, are now monitored on an ongoing basis and action is taken to improve service as required. Quarterly audits are also undertaken and reported internally and to the Primary Care Trust. The Trust will participate in the next national sentinel stroke audit in 2010.

Stroke indicators are reviewed monthly at the Clinical Quality Monitoring Group, chaired by the Executive Medical Director; and stroke data is part of the Trust's performance review process. There is also a Stroke Clinical Development multi-disciplinary team (MDT) group which meets on a monthly basis to review and implement actions required to improve the service.

University Hospitals Birmingham NHS Foundation Trust has made the following progress by 31 March 2010 in taking such action: the actions listed above were all in place by 31 March 2010.

University Hospitals Birmingham NHS Foundation Trust has participated in special reviews or investigations by the Care Quality Commission relating to the following areas during 2009/10:

Hygiene Code inspection on 22 October 2009. University Hospitals Birmingham NHS Foundation Trust intends to take the following action to address the conclusions or requirements reported by the CQC: no action required.

University Hospitals Birmingham NHS Foundation Trust has made the following progress by 31 March 2010 in taking such action: no action required.

The Trust received a letter from the Care Quality Commission in September 2009 about being a potential outlier in May 2009 in mortality for the primary diagnosis group 'Fluid and Electrolyte Disorders'. The Trust carried out a rigorous assessment of the mortality relating to this specific group of patients and found that the increased mortality rate was due to low activity and the complexity of patients treated. A review of the case notes for this group of patients was also undertaken to provide additional assurance; the Trust is satisfied that the care provided was appropriate.

2.2.6 Information on data quality

University Hospitals Birmingham NHS Foundation Trust submitted records during 2009/10 to the Secondary Uses service for inclusion in the Hospital Episode Statistics which are included in the latest published data. The percentage of records in the published data:

- which included the patient's valid NHS Number was: 97.1% for admitted patient care; 97.7% for outpatient care; and 89.9% for accident and emergency care.

- which included the patient's valid General Practitioner Registration Code was: 100% for admitted patient care; 100% for outpatient care; and 100% for accident and emergency care.

The percentages above have been calculated using the latest available published Secondary Uses Service data (April 2009-January 2010) and the data which UHB has submitted to SUS for February-March 2010 which is not yet published.

University Hospitals Birmingham NHS Foundation Trust's score for 2009/10 for Information Quality and Records Management, assessed using the Information Governance Toolkit was 76%.

University Hospitals Birmingham NHS Foundation Trust was subject to the Payment by Results clinical coding audit during the reporting period by the Audit Commission and the error rates reported in the latest published audit for that period for diagnoses and treatment coding (clinical coding) were:

Primary Diagnoses Incorrect 4.3%
Secondary Diagnoses Incorrect 3.8%
Primary Procedures Incorrect 8.6%
Secondary Procedures Incorrect 4.7%

The results should not be extrapolated further than the actual sample audited; General Medicine and Ear, Nose and Throat (ENT) were reviewed within the sample.

Part 3: Other information

3.1 Overview of quality of care provided during 2009-10

The tables below show the Trust's performance in 2009-10 and 2008-09 for a selection of indicators for patient safety, clinical effectiveness and patient experience. The Board of

Directors has chosen to include the same selection of indicators as reported in the Trust's 2008-09 Quality Report to enable patients and the public to judge performance over time.

The patient safety and clinical effectiveness indicators were originally selected by the Clinical Quality Monitoring Group because they represent a balanced picture of quality at UHB. The patient experience indicators were selected in consultation with the Care Quality Group which has Governor representation to enable comparison with other NHS trusts.

The latest available data is shown below and has been subject to the Trust's usual data quality checks by the Health Informatics team. Benchmarking data has also been included where possible. Performance has been monitored and challenged during the past year by the Clinical Quality Monitoring Group and the Board of Directors. In addition, the Trust has reported on performance against these indicators during the past year in the Quality Report updates published on its quality web pages: <http://www.uhb.nhs.uk/Services/All/Quality/Reports.aspx>

3.2 Performance of Trust against selected indicators

Indicators	2009-10	Peer Group Average (where available)	2008-09*
Patient safety indicators			
1(a). MRSA: Patients with MRSA infection/10,000 bed days (includes all bed days from all specialties) <i>Lower rate indicates better performance</i>	0.47	0.40	1.15
Time period	April 09-Jan 10	April 09-Jan 10	2008-09

Data source	Trust PICS data	Cleveland Clinic website	Trust PICS data
Peer group		Cleveland Clinic, Ohio, U.S.A.	
8. Percentage of beta blockers given on the morning of the procedure for patients undergoing first time coronary artery bypass graft (CABG)	93.3%	<i>Not available</i>	86.6%
<i>Higher % indicates better performance</i>			
Time period	2009-10		2008-09
Data source	Trust PICS data		Trust PICS data

* The data presented for 2008-09 is the latest available and therefore updates some of the data reported in the Trust's 2008-09 Quality Report.

Notes on clinical outcome measures

The data shown is subject to standard national definitions where appropriate. The Trust has also chosen to include infection and readmissions data which has been corrected to reflect specialty activity, taking into account that the Trust does not undertake paediatric, obstetric, gynaecology or elective orthopaedic activity. These specialties are known to be very low risk in terms of hospital acquired infection for example and therefore excluding them from the denominator (bed day) data enables a more accurate comparison to be made with peers.

6: The admissions data for 2009-10 and 2008-09 includes daycase patients as well as all elective and emergency admissions.

7: Aspirin, clopidogrel or warfarin are given to reduce the likelihood of recurrent stroke or transient ischaemic attack (TIA) in patients who have already suffered a stroke.

Any patients who are identified as not having been given aspirin, clopidogrel or warfarin during their stay are followed up to ensure they have been discharged on these drugs if clinically appropriate. The Cleveland Clinic, located in Ohio in the U.S.A., is a not-for-profit, multi-specialty academic medical centre that integrates patient care with research and education, and is widely regarded as being amongst the best healthcare providers in the U.S.A.

8: Beta blockers are given to reduce the likelihood of peri-operative myocardial infarction and early mortality. This indicator relates to patients already on beta blockers and whether they are given beta blockers on the day of their operation. All incidences of beta blockers not being given on the day of operation are investigated to understand the reasons why and to reduce the likelihood of future omissions.

We have chosen to measure our performance against the following metrics	2009-10	Comparison with other NHS trusts 2009-10	2008-09	Comparison with other NHS trusts 2008-09	2007-08	Comparison with other NHS trusts 2007-08
Patient experience indicators						
9. Overall were you treated with respect and dignity			88	Intermediate 60% of trusts	89	Intermediate 60% of trusts
Time period & data source	Trust's Inpatient Report, Quality Commission	2009 Survey Care	Trust's Inpatient Report, Quality Commission	2008 Survey Care	Trust's 2007 Inpatient Report, Healthcare Commission	
10. Involvement in decisions about care and treatment			70	Intermediate 60% of trusts	67	Worst performing 20% of trusts
Time period & data source	Trust's Inpatient Report, Quality Commission	2009 Survey Care	Trust's Inpatient Report, Quality Commission	2008 Survey Care	Trust's 2007 Inpatient Report, Healthcare Commission

Notes on patient experience measures

9-13: The scores included in the table above are benchmark scores rather than percentages, calculated by converting responses to particular questions into scores. For each question in the survey, the individual responses were scored on a scale of 0 to 100. The higher the score for each question, the better the trust is performing.

3.3 Performance against key national priorities and Core Standards

Key national priorities and Core Standards	Time Period for 2009/10	2009-10	2009-10 Target	2008-09	2008-09 Target
The Trust has fully met the core standards	Apr 2009 – Mar 2010	44	44	44	44

Clostridium difficile year on year reduction (post-48 hour cases)	Apr 2009 – Mar 2010	176	348	357	526
MRSA – maintaining the annual number of MRSA bloodstream infections at less than half the 2003/04 level	Apr 2009 – Mar 2010	13	30	35	48
62-day wait for first treatment from urgent GP referral: all cancers ¹	Apr 2009 – Feb 2010	84.5%	85%	82.7% (Jan – Mar 09)	85%
62-day wait for first treatment from consultant screening service referral: all cancers ¹	Apr 2009 – Feb 2010	91.9%	90%	94.4% (Jan – Mar 09)	90%
31-day wait from diagnosis to first treatment: all cancers ¹	Apr 2009 – Feb 2010	97.2%	96%	96.7% (Jan – Mar 09)	96%
31-day wait for second or subsequent treatment: surgery ¹	Apr 2009 – Feb 2010	96.4%	94%	95.3% (Jan – Mar 09)	94%
31-day wait for second or subsequent treatment: anti cancer drug treatments ¹	Apr 2009 – Feb 2010	99.0%	98%	98.4% (Jan – Mar 09)	98%
Two week wait from referral to date first seen: all cancers ¹	Apr 2009 – Feb 2010	94.2%	93%	92.8% (Jan – Mar 09)	93%
18-week maximum wait from point of referral to treatment (admitted patients)	Apr 2009 – Feb 2010	95.4%	90%	95.0% (Jan – Mar 09)	90%
18-week maximum wait from point of referral to treatment (non-admitted patients)	Apr 2009 – Feb 2010	98.0%	95%	97.3% (Jan – Mar 09)	95%
Maximum waiting time of four hours in A&E from arrival to admission, transfer or discharge ²	Apr 2009 – Mar 2010	98.5	98%	98.1%	98%
People suffering heart attack to receive thrombolysis within 60 minutes of call (where this is the preferred local treatment for heart attack)	N/A	No longer a target as Trust will have fewer than 20 cases in 2009/10.		75%	68%
Screening all elective in-patients for MRSA ³	Apr 2009 –	121.4%	100%	135.3%	100%

	Mar 2010		(Jan - Mar 09)
--	----------	--	----------------

¹ The national targets for cancer were changed from 1 January 2010 so the Trust's performance for 2008-09 now uses the new definitions to aid comparison.

² Data includes patients who attended South Birmingham GP Walk In Centre (Katie Road) from July 2009.

³ Some patients are screened more than once for MRSA.

3.4 Specialty Quality Indicators

The Trust's Quality and Outcomes Research Unit (QuORU) was set up in 2008-09. The unit has linked a wide range of information systems together to enable all important elements of service delivery to be analysed and monitored in a sophisticated way. In 2009-10, the unit has focused on supporting clinical teams to develop useful and innovative quality indicators to use within their specialties to monitor and improve patient care, experience and outcomes. Clinical staff have proposed a huge number of specialty quality indicators across the three domains of quality – patient safety, clinical effectiveness and patient experience – which are at various stages of development:

Indicator Development Stage	Number of Indicators
Stage 3: Metric signed off by QuORU Board as an appropriate measure of quality	88
Stage 2: Data shared with clinical staff concerned for validation and refinement of methodology as necessary.	18
Stage 1: Health Informatics and clinical staff meet to understand the proposed indicator, check whether the data is recorded and can be extracted and to verify it makes sense.	57
In preliminary discussion	158
Total	321

The table below shows performance at a specialty level for a wide selection of the quality indicators developed by clinicians, Health Informatics and the Trust's Quality and Outcomes Research Unit. Performance is shown for 2009-10 and 2008-09 where possible (some of the data has only started to be recorded during 2009-10) and benchmarking data is also provided where possible. In line with the Trust's commitment to transparency, the data shown is not just limited to good performance; areas where performance can be improved will be taken forward by the specialties concerned during 2010-11. The methodology and data for all indicators have been checked and validated by the appropriate clinical staff to ensure they accurately reflect the quality of care provided.

The Trust has signed a contract with West Midlands Strategic Health Authority (SHA) to form a Quality Institute with the University of Birmingham to help provide support to the regional Quality Observatory. UHB has also mapped NHS diagnostic and procedural coding structures to those used in the U.S.A. which means we will be able to directly compare patient care provided at UHB with that provided by U.S.A. hospitals in the future.

Speciality	Indicator	Goal	Numerator (Apr 08 - Mar 09)	Denominator (Apr 08 - Mar 09)	% (Apr 08 - Mar 09)	Numerator (Apr 09 - Mar 10)	Denominator (Apr 09 - Mar 10)	% (Apr 09 - Mar 10)	Data Source
A&E	Average time taken from arrival in A&E to when CT head scans were done				2.18 hours (for 750 patients)			2.09 hours (for 1146 patients)	CRIS Symphony
A&E	Average time taken from arrival in A&E to when CT Head with contrast scans were done				2.36 hours (for 46 patients)			3 hours (for 37 patients)	CRIS Symphony
Acute Medicine	7 day readmissions: Acute Medicine MAU	<4% for Acute Medicine	749 273	25637 7386	3% 4%	885 324	25724 7141	3% 5%	Lorenzo

3.5 Mortality

The Trust continues to monitor mortality as close to real-time as possible with senior managers and clinicians receiving regular communication detailing mortality information, more retrospective and longer term comparative analysis is reported monthly to the Trust's Clinical Quality Monitoring Group. Any anomalies or unexpected elevated death rates are promptly investigated with thorough clinical engagement.

Although the Trust is generally treating more elderly patients and patients with complex conditions, mortality remains stable. In line with the national trend, emergency and overall mortality rates have reduced slightly over the last four financial years as shown in the graph below.

A statistical review of the Trust's mortality rates for 2008-09 was completed during 2009-10 by senior clinical statisticians at the Cleveland Clinic in the U.S.A., and the analysis showed no cause for concern.

3.6 Clinical Portal

During 2009-10, the Trust has developed the first stage of an in-house electronic patient record (EPR) solution called the Clinical Portal in conjunction with clinical and managerial staff, overseen by the Trust's EPR Executive Group. The Clinical Portal brings together a wide range of patient information sources including the Trust's Prescribing Information and Communication System (PICS), iPM (patient administration system), imaging, laboratory results and Outpatient clinical correspondence in an electronic format. The aim of the Clinical Portal is to significantly reduce organisational reliance on paper records alongside the opening of the new hospital. The Clinical Portal is currently being rolled out across specialties to be used for Outpatient services. The plan is for the Clinical Portal to eventually be implemented for all inpatients in the longer term.

3.7 Prescribing Information and Communication System (PICS)

The Trust's electronic, rules-based clinical information, drug prescribing and administration system has been in use and continuously developed over the past ten years and supports clinical decision-making for all inpatients. A significant amount of work has been done during

2009-10 with clinical staff to develop a version of PICS for Outpatients and Daycase patients which will be implemented during 2010-11. The Trust is also developing a version of PICS for use in A&E which will take longer as it is dependent upon integration with other systems such as Symphony (the patient management system used in A&E).

An electronic observation chart was developed during 2009-10 within PICS which has been successfully piloted in multi-specialty medicine and Burns, and will be implemented across another twelve wards during 2010-11. The electronic observation chart incorporates a standardised early warning score so that when observation data indicates a patient is deteriorating, an electronic message is automatically sent to the Outreach Team *Blackberry* smartphone. Ward order communications have also been implemented during 2009-10 which enable staff to request services within PICS for patients from ten departments such as x-ray and physiotherapy. This function has been widely used as shown in the table below and will be rolled out to other departments during 2010-11:

Service Request Type	Number Requested
Diabetes	248
Endocrinology	20
Gastro-intestinal Endoscopy	32
Gastro-intestinal Physiology	1
Imaging (x-ray, MRI, CT scans, ultrasound)	44,918
Nutrition and Dietetics	1,050
Occupational therapy	784
Physiotherapy	363
Respiratory	142
Speech therapy	647
Grand Total	48,205

3.8 Healthcare Evaluation Data (HED) tool

The Trust has developed an interactive tool which enables clinical and managerial staff to evaluate the quality of healthcare delivery and operational efficiency in comparison to acute and mental health trusts in England. The tool uses Hospital Episode Statistics (HES) data and applies an advanced methodology which accounts for casemix and other variables, incorporates all care delivered and can drill down to a patient level (anonymised).

A wide range of aspects of care delivery are included in the tool: activity, mortality, length of stay, DNAs (number of patients who did not attend their outpatient appointments), new to follow-up appointment ratios and market share (GP referrals).

The Care Quality Commission (CQC) is currently reviewing the Trust's HED tool and UHB has already entered into commercial contracts to provide the tool to a range of interested providers.

3.9 Clinical Dashboard

The Trust's ward-level digital Clinical Dashboard has been widely used by clinical and managerial staff during 2009-10: more than 1,600 users have logged into the system over 19,000 times in total. A number of developments have been made to the Clinical Dashboard over the past year which include:

- A dial showing the percentage of nutritional supplements prescribed but not administered for individual wards has been added.
- Nursing dependencies have been added to the dashboard for each ward to show patient complexity in relation to the number of nursing staff on the ward.
- A visual bed management tool has been piloted on five wards (medical, multi-specialty and admissions unit) to enable staff to see at a glance bed occupancy, patients' length of stay, gender, infection status, whether the patient is waiting for TTOs (drugs to take home) and whether beds need cleaning. The plan is to eventually implement this for all wards in the new hospital.

3.10 My Health at UHB

The Trust has developed a secure, prototype website called 'My Health at UHB' where patients with chronic long-term conditions can view information about their condition, appointments, blood results (within certain parameters), how to contact other patients with the same condition and to access advice. This has been successfully piloted in Liver Medicine and the Trust intends to implement this for Liver patients during 2010-11, and potentially within other specialties as appropriate. Access to the website will be only be granted following discussion between individual patients and their Consultants to ensure appropriate Governance arrangements are in place.

3.11 Quality Web Pages

The Trust launched the Quality web pages on its website in November 2009 which provide information relating to quality for patients and the public:

- Quality Reports: this includes the Trust's 2008-09 Quality Report plus quarterly update reports on progress.
- Specialty Quality Indicators: graphs showing performance and explanatory text for specialty quality indicators which are updated monthly
- Department of Health Quality Indicators: graphs showing performance for some of the indicators suggested by the DH which are updated quarterly
- Other information: this includes some Annual Reports on specialised services such as HIV and national audit reports for example.

The Trust intends to publish regular data for more of the specialty quality indicators during 2010-11 on the new website due to be launched in June 2010 with the opening of the new hospital.

3.12 Incident Reporting

An electronic reporting system ensures a more efficient and effective means of reporting incidents. The Risk Management Team have focused on the roll out of the electronic DatixWeb system in 2009/10. The electronic system enables staff, when submitting an online form, to select which line manager the form should be sent to for completion and provides assurance to staff that the form will be processed. From 1 April 2010, DatixWeb will be the principal medium used across the Trust for incident reporting; in areas where staff do not have access to a PC a paper report can still be completed, however the responsible line manager will be expected to input the form into the electronic reporting system. The system enables improved monitoring of reporting across the Trust and ensures early detection of areas or individuals who are experiencing difficulties with the process providing a focused approach to support and additional training from the Risk team.

3.13 Risk Dashboard

To supplement the electronic incident reporting system a Risk Dashboard has been developed which provides clinical staff with access to real time data from incident reports submitted within their clinical area and Division. The Risk Dashboard uses the live online data from the DatixWeb reporting system to identify information regarding the top 5 incident types reported, the rate of reporting as well as allowing direct access to incident summaries. The Risk Team will work with clinical teams, using the dashboard to analyse trends and to formulate action plans to mitigate any risk. Actions identified from serious incidents requiring investigation (SIRIs) will also be included in the action plan to ensure that recommendations from these investigations are implemented appropriately. The action plans are an integral part of the dashboard and will form a monitoring and assurance tool for the Risk Department. The introduction of the Risk Dashboard is a relatively new development for the Trust which will be regularly reviewed and refined throughout 2010-11.

Appendix A: Examples of specific actions reported in 2009-10 following local clinical audits

Specialty	Audit Title	Actions taken or planned
Accident and Emergency	A&E nursing documentation audit	Where the expected documentation standards were not met, nursing staff were reminded of the standards, information was made available and training offered where appropriate.
Cardiology	Frequency of Echocardiography in Patients with ST-Elevation MI and Non-ST Elevation MI Admitted to CCU at UHB	The data to date has shown patients presenting with NSTEMI or STEMI are having echocardiograms in keeping with UHB and European Cardiology Society Guidelines.
Clinical Microbiology	Audit of the contamination of blood cultures	The closed blood collection system to be introduced as a standard within UHB, and complete blood collection packs to introduced. An education programme is planned for practitioners who collect blood.
Clinical Microbiology	Audit of Antibiotic Susceptibilities for Microbiological Isolates from the Trauma and Orthopaedics (T&O) Department	New antibiotics protocols for treatment of chronic bone infections to be developed, in collaboration with the T&O Department
Critical Care	The effect of glycaemic control on outcome within the ICU dept.	Nurses to be trained on the importance of glycaemic control. A simple protocol is to be published and placed on all units.
Critical Care	Documentation of Insertion of Peripheral Vein Cannulation, Arterial lines, Central vein cannulation using labels	A sticker has been develop to enable quick and easy documentation of any lines, cannulae that are inserted.
Dermatology	Management and prevention of steroids induced osteoporosis	Clinical guidelines relating to assessment, documentation and preventative measures were updated.
Diabetes	Audit of Diabetic Centre nurse-led telephone advisory documentation	The results were fed back to staff, who were congratulated on the high standard of their documentation.
Dietetics	Dietetic service review to Oncology.	A new role (Dietetic Assistant Practitioner) was introduced to allow the service to be expanded to all cancer patients. A specialist team for Home Enteral Feeding was introduced. Information and data systems were also improved.
Dietetics	Pilot of patient satisfaction survey of Home Enteral Feeding (HEF)	A database to manage HEF information was developed, and the role of HEF staff was expanded. Expected standards were put in place.
Endocrinology	Adult phenylketonuria (PKU) population data audits	Better written information for PKU patients is now provided, and regular events are in place to help them to keep in touch. A monthly blood test reminder service has been set up in conjunction with IT. There are plans to look into the effect of obesity in PKU to improve the care offered to patients.

Specialty	Audit Title	Actions taken or planned
ENT	The use of the bone-anchored hearing aid for the rehabilitation of unilateral deafness	The information given to patients has been updated.
ENT	The use of prophylactic antibiotics in cochlear implant surgery	To continue with the good practice found by the audit.
ENT	Laryngeal Dysplasia - 5 year follow up	The results were discussed at an international meeting, and there are plans to draw up new national guidelines for treatment.
General Medicine	Proton Pump Inhibitors (PPI) in Upper Gastrointestinal (UGI) Bleed Audit	Staff have been reminded that pre-endoscopic PPI in UGI bleed are not recommended by the West Mercia and SIGN guidelines, and a poster displaying the guidelines is in place on the Medical Assessment Unit.
General Surgery	Audit of the nurse led follow up clinic (Colorectal)	A business card with the Clinical Nurse Specialist's contact number is now given to all patients seen in clinic, as well as a leaflet detailing the follow up process
Haemophilia	Health Care at Home Service Audit	To circulate the audit results to all the patients who use Healthcare at Home's delivery service so that they can see that their opinions are valued and passed on to the service provider. Also to reiterate to patients that there is a non premium phone line which they can use.
Liver Medicine	Liver biopsies at QE	Failure rates and complication rates were acceptable, to continue with the good practice, and to re-audit once the new FibrosScan machine is in place.
Liver Surgery	Outcomes of donor livers with HBV, HCV and HIV positivity in liver transplantation.	Protocols regarding virology testing (how often and what tests) to be implemented
Maxillofacial	The role of alcohol in the aetiology of maxillofacial trauma	Better recording in A&E of alcohol intake prior to assault is needed - education sessions planned for A&E and Maxillofacial junior doctors.
Neurology	Audit of the use of DaTSCANS at UHB 2008-09	Individual clinicians who are requesting DaTSCANS to ensure that structural imaging is requested
Occupational Therapy	Evaluation of Student Exit Questionnaires	Introduce recommended reading lists for students, update 'local' information given to students (names, contact details etc).
Oncology	Clinical Standards Audit	Where necessary, staff were reminded of the expected standards for documenting observations, falls assessments, nutrition and manual handling. A new care plan to help patients settle into the ward was introduced.

Specialty	Audit Title	Actions taken or planned
Physiotherapy	Upper limb Exercise class outcome measure audit	To introduce the SPADI (Shoulder Pain and Disability Index) outcome measure to assess patient progress.
Physiotherapy	Documentation audit - Respiratory Physiotherapy	Results were fed back to the team, highlighting importance of patient consent and confirmation
Physiotherapy	Staff access physiotherapy satisfaction survey	Staff satisfaction with the service was very high, and the questionnaires will continue to be distributed to gather as much information as possible.
Radiology	Awareness of the various radiological procedures among FY1 doctors	Junior staff to be made aware of the information booklet on best use of radiological procedures, and training is provided during their induction program.
Renal Medicine	Guidelines for obtaining informed consent for the testing of blood borne viruses from dialysis and pre-dialysis patients	All medical and nursing staff competencies for taking consent to be assessed, alternative facilities are to be provided for taking consent to ensure privacy, and the guidelines are to be reviewed and updated.
Renal Surgery	Audit of serum free light chain (FLC) measurements in patients with multiple myeloma	FLCs have been added to the automated blood tests proposed by the drugs computer system when a patient new acute renal failure is admitted. All new junior doctors are to receive training when they start on the ward.
Respiratory Medicine	Non-invasive ventilation for COPD	Training and documentation to be reviewed in line with new standards.
Rheumatology	Review of immunology tests	The clinical standards setting out the frequency and types of tests were updated, and the way test samples are dealt with was improved.
Rheumatology	Eligibility for Patient Education	The results were fed back to the PCT. Potential development of a referral system to education groups for new patients diagnosed with inflammatory arthritis is in discussion.
Rheumatology	Audit on the use of Rituximab in Rheumatology	A proforma was developed to aid data collection and ensure that NICE guidelines continue to be met.
Rheumatology	Patients requirements for education about lupus	A series of education sessions are to be set up in various settings.
Rheumatology	Assessing eligibility for anti- TNF therapy in patients with psoriatic arthritis	A disease assessment tool was implemented
Therapy services	Therapy services documentation audits	Documentation audits are undertaken every quarter by clinical teams within each Therapy Service. Reports and action plans are

Specialty	Audit Title	Actions taken or planned
		produced for each service and are reviewed by Clinical Leads for inpatients and outpatients and Heads of Service.
Urology	Percutaneous Nephrolithotomy (PCNL): Audit (2005-08)	All patients are to have a urine test before admission, any positive results will be treated with antibiotics before the procedure is carried out. Using a different technique will reduce patient's length of stay in hospital, and any delayed discharges will be investigated further.
Various	Expanded Practice Protocols (EPPs) and Patient Group Directives (PGDs) for Nurses and Allied Health Professionals	Several EPPs and PGDs were reviewed over the year to ensure staff were meeting the expected standards. In some cases the protocols were updated to reflect current practice, and the staff were then familiarised with the new protocols.
Various	Peripheral venous cannula care audit	The findings were disseminated widely across the Trust. Training was made available to staff, guidelines were put up in clinical areas and ongoing audit via the national Saving Lives programme was established across the Trust.
Various	Electric Beds, Bedrails & Trolley Audit	New equipment was ordered where required, and repairs ordered where needed. Spare bed rails (beds now have integral rails) were removed to clear space in clinical areas.
Various	Drug preparation, administration and storage audits	Results were fed back to all staff on the wards, and staff were congratulated on their good practice. Repairs made to trolleys and fixtures, and anaphylaxis packs supplied by Pharmacy where required. Staff were reminded of the expected standards for drug preparation, administration and storage. Sufficient sharps boxes were made available.
Various	Audit of the Nebuliser Cleaning Guidelines and Practices	Results were fed back to staff across the Trust, the guidelines were updated. Only agreed nebulisers are to be used and there is to be a cleaning flowchart in all clinical areas.
Various	Medical Documentation Audit	Each speciality received an individual report and action plan based on their results. Actions from individual specialities included purchasing name stamps, providing laminated copies of the Trust standards, and reminding medical staff of the standards. Trust wide, an online training package on documentation standards is planned. The Documentation standards are being reviewed.

Specialty	Audit Title	Actions taken or planned
Various	Nursing Documentation Audit	Each ward received an individual report and action plan based on their results. Where the expected documentation standards were not met, nursing staff were reminded of the standards, information was made available and training offered where appropriate.
Various	Saving Lives infection control audits	Ongoing programme of audit undertaken in clinical areas across the Trust, all areas can input results and view reports on online reporting system and clinical area leads produce action plans where improvement required. Compliance monitored by clinical divisional management teams and Trust Infection Prevention and Control Committee.
Various	Hand hygiene audits	Ongoing audits undertaken in clinical areas across the Trust, clinical area leads input data and generate local reports showing staff compliance so that findings can be fed back to staff. Weekly Trust-wide report also published on intranet. Compliance monitored by clinical divisional management teams and Trust Infection Prevention and Control Committee.

Annex: Statements from stakeholders

University Hospitals Birmingham NHS Foundation Trust has shared its 2009-10 Quality Report with the commissioning Primary Care Trust, NHS South Birmingham, Birmingham Local Involvement Network (LINK) and Birmingham City Council Overview and Scrutiny Committee.

NHS South Birmingham and Birmingham LINK have reviewed the Trust's Quality Report for 2009-10 and provided the statements below. Birmingham City Council Overview and Scrutiny Committee has chosen not to provide a statement but plans to do so for the 2010-11 Quality Report.
